DAVID JOHNS

WHERE I'VE BEEN

I've worked with a bunch of amazing people in London and Sydney.

WHAT I USE

Code

My first introduction too coding was when Actionscript 2 was on included in Flash. This led on to expressions within Aftereffects and JQuery. Predominately, I use code for front end development to enhance the users experience.

Design

I use whatever I need to create the design I am after. Photoshop, Illustrator, 3D Studio Max, pencils, ink, sand, charcoal... whatever. I've had a lot experience with these tools (I can remember using Photoshop when it was called ImagePro) and know how to get the best out of them. Video/Audio Video production came with the territory for me. I am very comfortable using an array of plugins and 3D techniques. On the other hand, audio production is a passion of mine. I have produced commercial tracks, band songs and my own personal releases. I find sound design just as important as it's visual counterpart.
